

6—BEDDING

REF NO	DESCRIPTION	SYMBOL	CARTOGRAPHIC SPECIFICATIONS*	NOTES ON USAGE*
6.1	Horizontal bedding		all lineweights .2 mm circle diameter 2.5 mm	Inclined (upright) and overturned bedding symbols are used when the top direction of beds is known to a reasonable degree of certainty.
6.2	Inclined bedding—Showing strike and dip		1.0 mm 40 HI-6 5.0 mm all lineweights .2 mm	On maps where determination of top direction is "known" at some places and "unknown" at others, such symbols also may be used to indicate where top direction is "unknown" (compare with ref. nos. 6.13-24). Symbols may be used without a dip value to indicate the generalized strike and direction of dip of beds.
6.3	Vertical bedding—Showing strike		2.0 mm	
6.4	Overturned bedding—Showing strike and dip		1.0 mm 65 HI-6 .625 mm radius	
6.5	Bedding overturned more than 180 degrees—Showing strike and dip		.7 mm 20 HI-6 .375 mm radius	
6.6	Inclined (dip direction to right) bedding, for multiple observations at one locality—Showing strike and dip		5.5 mm 40 HI-6 1.0 mm 1.325 mm	
6.7	Inclined (dip direction to left) bedding, for multiple observations at one locality—Showing strike and dip		40	For symbols representing a single observation at one locality, point of observation is the mid-point of the strike line.
6.8	Vertical bedding, for multiple observations at one locality—Showing strike		2.0 mm	For multiple observations at one locality, join symbols at the "tail" ends of the strike lines (opposite the ornamentation); the junction point is at point of observation. To obey the right-hand rule, use the "dip direction to right" symbols (use "dip direction to left" symbols only when necessary to prevent overcrowding).
6.9	Overturned (dip direction to right) bedding, for multiple observations at one locality—Showing strike and dip		.625 mm radius 65 HI-6 1.0 mm	
6.10	Overturned (dip direction to left) bedding, for multiple observations at one locality—Showing strike and dip		65	
6.11	Bedding overturned more than 180 degrees (dip direction to right), for multiple observations at one locality—Showing strike and dip		20 HI-6 .7 mm .375 mm radius	
6.12	Bedding overturned more than 180 degrees (dip direction to left), for multiple observations at one locality—Showing strike and dip		20	
6.13	Inclined bedding, where top direction of beds is known from local features—Showing strike and dip		1.0 mm 30 HI-6 5.0 mm all lineweights .2 mm dot diameter .75 mm	Symbols that have a ball may be used to indicate a greater level of certainty in the determination of top direction.
6.14	Vertical bedding, where top direction of beds is known from local features—Showing strike. Ball shows top direction		2.0 mm	On maps where determination of top direction is "known" at some places and "unknown" at others, symbols that have a ball also may be used to indicate where top direction is "known" (compare with ref. nos. 6.1-12).
6.15	Overturned bedding, where top direction of beds is known from local features—Showing strike and dip		1.0 mm 85 HI-6 .625 mm radius	
6.16	Bedding overturned more than 180 degrees, where top direction of beds is known from local features—Showing strike and dip		.7 mm 10 HI-6 .375 mm radius	
6.17	Inclined (dip direction to right) bedding, where top direction of beds is known from local features, for multiple observations at one locality—Showing strike and dip		5.5 mm 30 HI-6 1.0 mm 1.325 mm	
6.18	Inclined (dip direction to left) bedding, where top direction of beds is known from local features, for multiple observations at one locality—Showing strike and dip		30	For symbols representing a single observation at one locality, point of observation is the mid-point of the strike line.
6.19	Vertical (top direction to right) bedding, where top direction of beds is known from local features, for multiple observations at one locality—Showing strike. Ball shows top direction		2.0 mm	For multiple observations at one locality, join symbols at the "tail" ends of the strike lines (opposite the ornamentation); the junction point is at point of observation. To obey the right-hand rule, use the "dip direction to right" symbols (use "dip direction to left" symbols only when necessary to prevent overcrowding).
6.20	Vertical (top direction to left) bedding, where top direction of beds is known from local features, for multiple observations at one locality—Showing strike. Ball shows top direction			
6.21	Overturned (dip direction to right) bedding, where top direction of beds is known from local features, for multiple observations at one locality—Showing strike and dip		.625 mm radius 85 HI-6 1.0 mm 1.7 mm	
6.22	Overturned (dip direction to left) bedding, where top direction of beds is known from local features, for multiple observations at one locality—Showing strike and dip		85	
6.23	Bedding overturned more than 180 degrees (dip direction to right), where top direction of beds is known from local features, for multiple observations at one locality—Showing strike and dip		10 HI-6 .7 mm .375 mm radius 1.325 mm	
6.24	Bedding overturned more than 180 degrees (dip direction to left), where top direction of beds is known from local features, for multiple observations at one locality—Showing strike and dip		10
