

8—FOLIATION (continued)

REF NO	DESCRIPTION	SYMBOL	CARTOGRAPHIC SPECIFICATIONS*	NOTES ON USAGE*
8.3—Secondary foliation (caused by metamorphism or tectonism) (continued)				
8.3.46	Horizontal gneissic layering		circle diameter 2.5 mm all lineweights .2 mm 	For symbols representing a single observation at one locality, point of observation is the mid-point of the strike line. For multiple observations at one locality, join symbols at the "tail" ends of the strike lines (opposite the ornamentation); the junction point is at point of observation. To obey the right-hand rule, use the "dip direction to right" symbols (use "dip direction to left" symbols only when necessary to prevent overcrowding).
8.3.47	Inclined gneissic layering—Showing strike and dip			
8.3.48	Vertical or near-vertical gneissic layering—Showing strike			
8.3.49	Inclined (dip direction to right) gneissic layering, for multiple observations at one locality—Showing strike and dip			
8.3.50	Inclined (dip direction to left) gneissic layering, for multiple observations at one locality—Showing strike and dip			
8.3.51	Vertical or near-vertical gneissic layering, for multiple observations at one locality—Showing strike			
8.3.52	Horizontal undulatory gneissic layering		circle diameter 2.5 mm all lineweights .2 mm 	
8.3.53	Inclined undulatory gneissic layering—Showing strike and dip			
8.3.54	Vertical or near-vertical undulatory gneissic layering—Showing strike			
8.3.55	Horizontal mylonitic foliation		circle diameter 2.5 mm all lineweights .2 mm 	
8.3.56	Inclined mylonitic foliation—Showing strike and dip			
8.3.57	Vertical or near-vertical mylonitic foliation—Showing strike			
8.3.58	Inclined (dip direction to right) mylonitic foliation, for multiple observations at one locality—Showing strike and dip			
8.3.59	Inclined (dip direction to left) mylonitic foliation, for multiple observations at one locality—Showing strike and dip			
8.3.60	Vertical or near-vertical mylonitic foliation, for multiple observations at one locality—Showing strike
